

Mentor Connect- Activity

22 April, 2026

Team Activity Session

1. The session began with an **overview of agile estimation practices**, setting the stage for participants to experience how real project planning discussions unfold.
2. Mentor divided the group into **three teams**, ensuring balanced participation and assigning one **team lead** per group to take responsibility for estimation.
3. Each team lead was asked to **estimate the time and story points** required to build a sample project page, simulating the role of a developer in sprint planning.
4. The tasks provided covered **frontend, backend, and database engineering work**, giving participants exposure to different layers of development.
5. Team leads first gave their **individual estimates** based on their understanding of the tasks, mirroring how developers initially approach planning.

Team Activity Session

6. Teams then engaged in **collaborative discussion**, debating complexity, dependencies, and effort before arriving at a refined estimate.
7. The final estimates were presented to the mentor, who provided **feedback and corrections**, highlighting gaps between participant assumptions and industry practices.
8. Mentor explained the **difference between story points and hours**, emphasizing that story points measure *relative effort and complexity*, not exact time.
9. A **live demo** was conducted to show how estimation is handled in real projects, including how teams negotiate and balance workloads.
10. Mentor stressed the importance of **asking clarifying questions** before committing to tasks, teaching participants to avoid assumptions.

Team Activity Session

11. Key professional practices were shared as a checklist for future projects:

- Ask your team about libraries being used.
- Request Figma or wireframes for clarity.
- Ensure proper Knowledge Transfer (KT).
- Clarify system design libraries in use.
- Check approved Chrome extensions.
- Identify device types to be supported.

12. Overall, the session improved participants' **awareness of agile practices**, strengthened teamwork, and prepared them for the realities of sprint planning in professional environments.

Thank you
